

ORTHOPEDIC REHABILITATION

Our Orthopedic Rehabilitation program strives to provide Orthopedic Therapy which focuses on restoring mobility and ensuring proper gait mechanics.

Many seniors will face the need to undergo joint replacement over the age of 65, when osteoarthritis becomes a leading cause of joint deterioration. Patients who choose surgery can expect an increase in mobility and a decrease in pain, which can help them return to their normal lifestyle.

Patients will receive therapy in increments multiple times a day.

We take an interdisciplinary approach to orthopedic rehabilitation, which plays a vital role in ensuring the best possible care for our patients.

Our dedicated team works closely with you and your family to develop a customized personalized care plan as we assess the following:

- Orthopedic management
- Transfer and mobility assistive techniques
- Pharmacy support
- Nutritional management
- Pain management
- Environmental safety

For more information about our Orthopedic Rehabilitation services or to schedule a tour of our facility, please contact us today!
